

Issue of 1847

Imperforate

Printed by Rawdon, Wright, Hatch & Edson

Benjamin Franklin

George Washington

On July 1, 1847 the first official United States stamps were issued featuring the portraits of our first postmaster and our first president. The 5¢ value paid for postal service up to a distance of 300 miles, and the 10¢ value paid for service beyond this point. These stamps were issued imperforate (unperforated) and had to be cut apart with scissors. The adoption of adhesive stamps paved the way to the remarkable development of the postal system of today.

The rapid expansion and popularity of the postal service soon made a greater flexibility in rates and necessity. Lower rates for all distances was deemed advisable and in 1851 a new set of stamps was issued for this purpose. If pre-paid, a 3¢ stamp was sufficient to cover charges up to a distance of 3,000 miles. 5¢ was required if not pre-paid. Beyond this point the rate was six or ten cents. 24¢, 30¢, and 90¢ values are known but it is believed that they were not regularly issued.

This issue marked a great milestone in postal progress. Due to the pressing need for a faster method of dispensing stamps to the public the stamps were machine perforated so that instead of being cut apart by scissors stamps were now easily and quickly separated. This set employed the same designs as the previous issue. The 24¢, 30¢, and 90¢ values were now regularly issued.

UPON the outbreak of war between the states in 1861, the postal authorities found it necessary to demonitize all of the United States stamps in order to prevent usage by the Confederate States. The issue of 1861 was created as a replacement. During the war, due to the scarcity of metal coins, these stamps were used as small change.

The removal of cancellations from used stamps for the purpose of reusing with intent to defraud the government caused the postal authorities to adopt the use of the grill. These metallic grills, which consisted of small square pyramids, were impressed on the stamp so that the fibers of the paper would be weakened and would completely absorb the cancelling ink and thus make cleaning for a second use impossible.

THE CONTINENTAL BANK NOTE COMPANY was awarded the contract to continue producing this series of postage stamps. To identify its product from that of its predecessor (the National Bank Note Company) secret marks were added to the retained designs through the 15¢ denomination. The 24¢, 30¢ and 90¢ values can only be distinguished by the shades. These secret marks are illustrated below:

Franklin. Dash of color added in pearl left of 1

Jackson. Closed outline of ornament left of U.S.

Washington. Shading under upper ribbon under THREE heavier.

Lincoln. First 4 vertical lines of left ribbon heavier.

Stanton. Semi-circles added in ball at lower left.

Jefferson. Crescent added in scroll ornament.

Clay. Balls in 2 crescent shaped.

Webster. Worn lines of shading in triangles and below U.S. Postage.

THE AMERICAN BANK NOTE COMPANY, having consolidated itself with the Continental Bank Note Company printed this series. Added interest for the collector is found in this issue because of the soft, porous paper used in contrast to the hard, snappy, translucent paper of the previous issues.

Issue of 1881-82

Perforated 12

Printed by the American Bank Note Co.

Benjamin Franklin

George Washington

Abraham Lincoln

Thomas Jefferson

DESIGNS of the 1881-1882 series at first glance appear to be a replica of the previous issue. Closer inspection will reveal a denser appearance in design which was due to the re-engraving of the plates. The characteristics of the recutting are shown:

- 1¢ - Lines of shading have been added to the upper arabesques, and vertical lines in the upper portion of the stamp have been deepened.
 3¢ - About 1mm. below the "ts" of cents a short horizontal dash has been etched. The width of the shading at the side of the central oval has been reduced.

- 6¢ - Three lines can be counted from the edge of the panel to the outside of the stamp. Before re-engraving four lines were present.
 10¢ - Four lines can be counted between the left side of the oval and the edge of the shield. Before re-engraving five lines could be counted.

A line of color appears in the white curve below "TS" of cents and "E" of Ten.

In printing this new issue watermarked paper was used for the first time on stamps intended for postage purposes. Watermarking had been used previously for revenue stamps and postcards. The watermark consisted of Double-line letters "U S P S" so distributed that each stamp on the sheet shows at least a part of the watermarking, as illustrated below.

In 1910 a single-line watermark was used for the first time by the Bureau.

DOUBLE-LINE WATERMARK

Benjamin Franklin

George Washington

IMPERFORATE

THIS series for the sake of uniformity and artistic effect featured the head of George Washington on all of the denominations except the 1¢ which portrayed Benjamin Franklin. Part of this issue was printed on a stock which was made of 35 per cent rag and are known as "bluish paper", although they are actually grayish in appearance. Most of the denominations printed on this paper are rare.

OFFICIALLY issued coil stamps came into being in 1908. As the name indicates, the stamps instead of being issued in sheet form, were made available in lengths which were coiled into rolls of five hundred and one thousand. Stamps in this form were found to be more convenient for handling large quantities of mail that called for the same stamp value. These coils were also made available to private companies who were licensed to perforate them and sell them in vending machines at neighborhood stores for the convenience of the public.

THIS series of coil stamps featured the designs of the previous regular issues. As an experiment the Bureau of Engraving and Printing used a 8½ perforation instead of the usual 12 in an effort to find a more suitable size. The 3¢ perforated 12 stamp of this series is the rarest coil only a few being used at Orangeburg, N. Y. and for that reason is omitted from this album.

DOUBLE-LINE

SINGLE-LINE

WATERMARK

WITH the coil issue of 1914-16 a rotary press was used for the first time in printing United States stamps. Rotary press stamps are printed from curved plates and are therefore slightly larger either vertically or horizontally than flat plate printings. This process of printing enabled the Bureau to produce stamps more quickly.

Issue of 1916-17

FLAT PLATE PRINTING

PERFORATED 10

UNWATERMARKED

James Madison

John Marshall

THE stamps of this series were a repeat of previous issues but with differences discernable only to stamp collectors. They were printed on unwatermarked paper and the \$2 and \$5 values were previously issued perforated 12. One of the most spectacular errors occurred in the printing of this series. Sheets of the 2¢ value were found with one stamp being of the 5¢ denomination. This was found on the lower right sheet of plate number 7942. On the Upper left sheet of plate number 7942 a double error was found. These errors continued to appear in later printings of the 2¢ stamp imperforate and perforated 11 and are greatly desired by stamp collectors.

OVERPRINTED KANS.

OVERPRINTED KANS.

OVERPRINTED NEBR.

OVERPRINTED NEBR.

To prevent losses from Post Office burglaries in the mid-west the rotary press issue of 1926 was overprinted Kans. (for use in Kansas) and Nebr. (for use in Nebraska). The overprint was intended to prevent the sale of stolen stamps in other states and to make attempts of disposal difficult. The experiment was discontinued after a short trial period and for that reason the issue is a prized collectors item.

REGULAR US ISSUES

The 1938 issue is known as the Presidential Issue, showing all the Presidents in order of their terms of office. It was in use until replaced by the 1954 issue. Printed on rotary press 400 subject plates except dollar values were 100 subject flat plates. All first sold at Washington, D.C. except 1/2¢ issued at Philadelphia. Pertinent details are:
