### Plastic flow

"This variety appears as a slight 'Doubling' of the design and may easily be mistaken for a retouch, re-entry, excess ink flow or a worn plate. It was caused during the manufacture of intaglio plates only after January 1968 and appears on the 6c black (type C, BABNC) and the 15c Bylot Island. When it appears, it usually affects a large area of the pane."
