The leopard is usually tawny-yellow or buff with black spots arranged in broken rings or rosettes. The leopard is a skillful hunter that primarily dwells in the forests but can also frequent savannas and deserts. In addition to the familiar spotted form, there is a rarer black mutant, popularly known as the black panther.

The Millennium

A Future of Hope

Photomosaic[®] is a method of arranging thousands of tiny photographs that when viewed from a distance, combine to form a single larger image. Robert Silvers invented this technology while still a student at MIT and founded Runway Technology Inc. in 1994.
